

ST3000 Ace Smart Transmitter

JTC Series of Flange Type

Differential Pressure Transmitters

JTC929A/JTC940A

General

The ST3000 Ace* Smart Transmitter is a microprocessor-based smart transmitter that features high performance and excellent stability. Capable of measuring gas, liquid, pressure, and liquid levels, it transmits 4 to 20 mA dc analog and digital signals according to the measured differential pressure.

It can also execute two-way communications between the SFC (Smart Field Communicator), and, via DE protocol, with the TDCS3000 or 3000^x and a database, thus facilitating self-diagnosis, range resetting, and automatic zero adjustment.

Flanged differential pressure transmitters mounted on tank sides are suitable for the measurement of liquid levels, boundary surface levels, and specific gravity.

Transmitter Handling Notes

To get the most from the performance this transmitter can offer, please use it properly noting the points mentioned below. Before using it, please read the Instruction Manual.

Transmitter Installation Notes

Warning

- When installing the transmitter, ensure that gaskets do not protrude from connecting points into the process (such as adapter flange connection points and connecting pipes and flanges). Gasket protrusion may result in leaks and output errors.
- Do not use the transmitter outside its defined pressure, temperature, and connection specifications. A serious accident may otherwise occur due to damage and leaks.
- When performing wiring work in explosion-proof areas, follow the work method specified in the explosion-proof guidelines. In addition, when the wiring for an explosion-proof product is a pull-in pressure-resistant packing-cable, be sure to use a pressure-resistant packing-cable adapter certified by Yamatake Corporation.
- Be sure to use the cable which allowable temperature is more than 65°C.

Caution

- After installing the transmitter, do not stand on it. Using it as a foothold could cause it to collapse and cause physical injury.
- Be careful not to hit the glass indicator with tools etc. This could break the glass and cause injury.
- The transmitter is heavy. Wear safety shoes and take care when installing it.

Wiring Notes

Warning

- To avoid shocks, do not perform electrical wiring work with wet hands or with live wires.

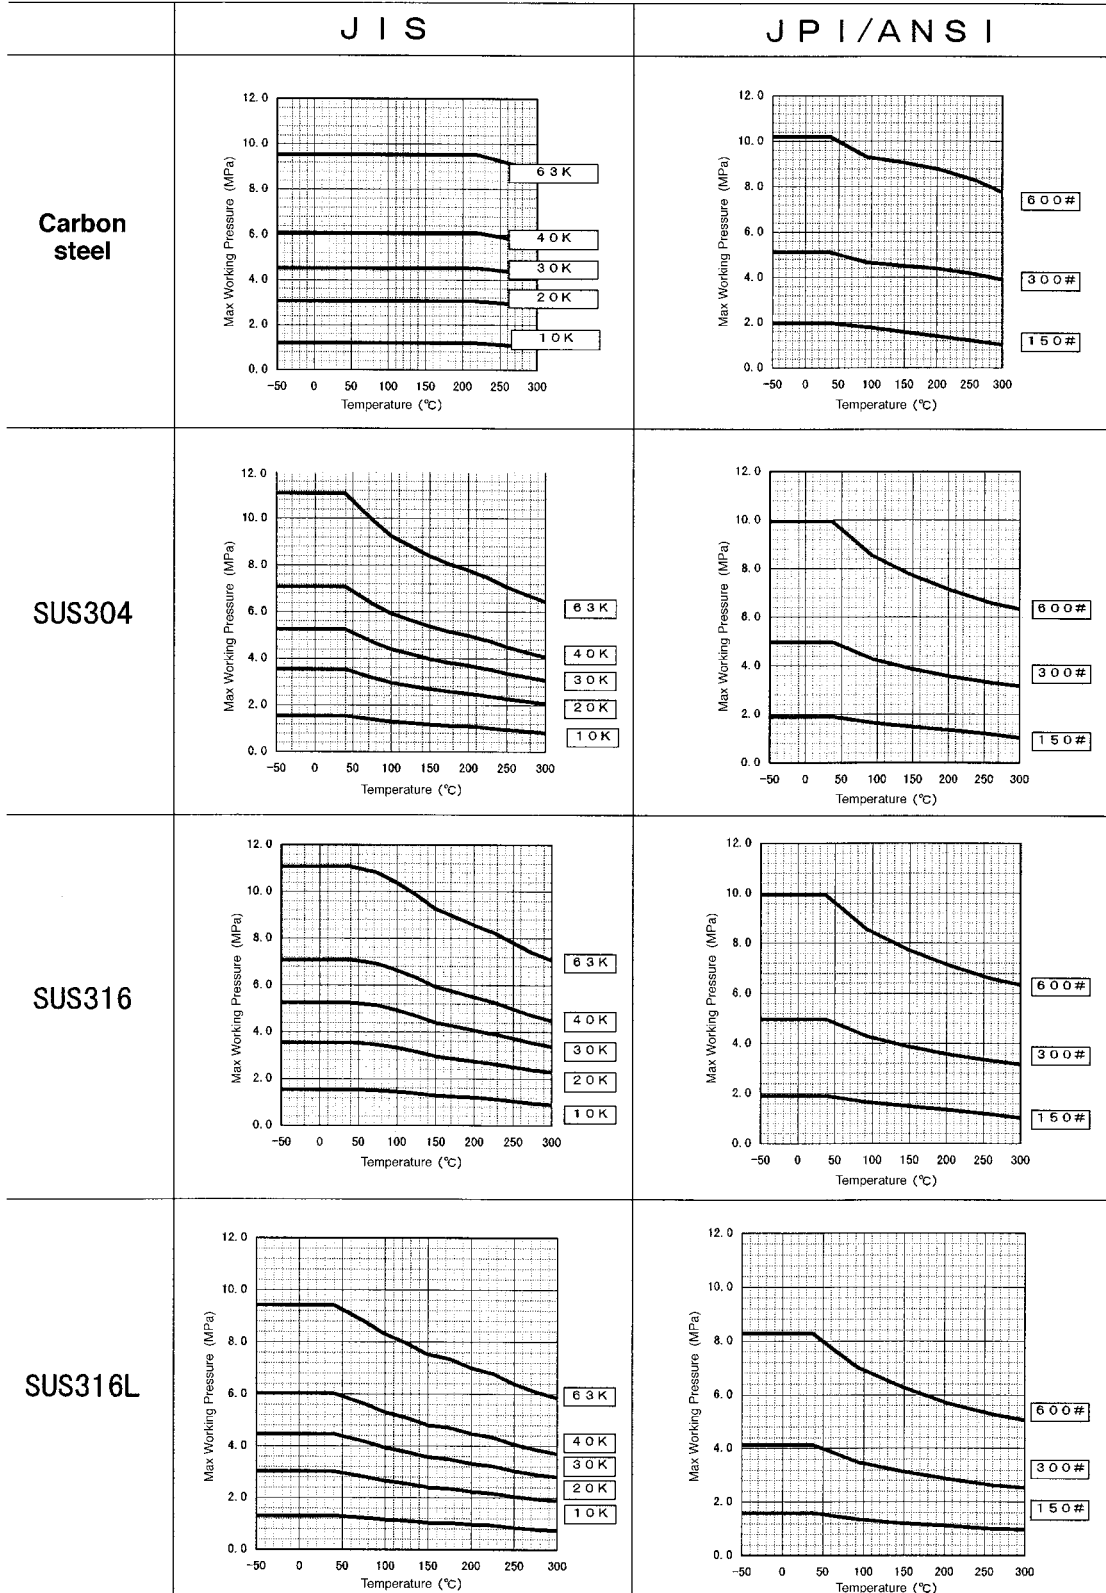

Caution

- Do wiring work properly in conformance with the specifications. Wiring mistakes may result in malfunction or irreparable damage to the instrument.
- Use a power supply that conforms to the specifications. Use of an improper power supply may result in malfunction or irreparable damage to the instrument.

Max Working Pressure

<ForNewAoe>

- Note1. Max Working Pressure depends on flange rating, flange materials and operating temperature. Please refer to the data blow. Operating range of temperature depends on the specifications of transmitter.
- Note2. In the case of flange type (JTF940□, JTC940□) and remote sealed type (JTU940□, JTH940□), Max Working Pressure depends on the smaller value of either 3.5MPa or following data.
