

LS Series

General purpose limit switches with robust construction in an extensive range of models, for use in a wide range of applications.

- UL/CSA/EN (CE) /GB (CCC) certified
- 2-circuit double break basic switch with rugged die-cast aluminum case
- Oil-, water- and dust-proof structure (IP67 protective structure)
- Wide range of options available: with neon lamp, with LED lamp, built-in gold-plated contacts, with double seal, corrosion-resistant, heat-resistant, cold-resistant, spatter-guarded, connector type, etc
- Operation position setting indicator (roller lever and roller plunger types)

STANDARD, GENERAL PURPOSE COMPACT TYPE

Most versatile LS compact limit-switch model, used in a wide range of applications.

- Wide range of models includes standard, high sensitivity, high overtravel, T.T. 90°, light operation and lock operation types.
- Wide range of actuator types.
- Certified compliance with a variety of international standards (UL/CSA, EN 60947-5-1, etc.)
- CCC-marked product with ground lead.
- Connector/prelead connector also available.
- With LED lamp (12V to 125Vac/dc). Neon lamp also available.
- Wide range of models includes double-sealed, corrosion-resistant, heat-resistant, and cold-resistant types.
- Low current load model also available.

STANDARDS COMPLIANCE

Certifying Body	Standard	File No.
UL	UL 1054	E 37559

	Catalog listing	1LS□-J□□□	2LS□-J□	3LS1-J	5LS□-J	6LS□-J	8LS□-J				
Standards	Compliance	JIS C 4508/JIS C 8201-5-1, IEC 60947-5-1									
	Certification *1	UL/CSA, EN 60947-5-1, GB 14048.5-2001									
Structure	Contact form	2-circuit double break									
	Contact type	Standard load	Silver, rivet								
		Low current load	Gold-plated silver, rivet								
	Terminal type	M4 screw (binding head machine screw with toothed washer), DIN 4-pin connector (M12 size), preloaded									
	Protective structure	IP67 (IEC60529, JIS C 0920)									
Pollution level	3 (EN 60947-5-1)*2										
Electrical performance (1): General characteristics	Electrical rating	See page D-024.									
	Dielectric strength	Between non-continuous terminals	: 1,000Vac, 50/60Hz for 1 minute (standard operating characteristics type)								
		Between each terminal and non-live metal part	: 600Vac, 50/60Hz for 1 minute (roller lever, high sensitivity characteristics type)								
		Between each terminal and ground	: 2,000Vac, 50/60Hz for 1 minute. : 2,000Vac, 50/60Hz for 1 minute (only G-type products with ground terminals).								
	Insulation resistance		Min. 100MΩ (by 500Vdc megger)								
		Initial contact resistance	Standard load	Max. 50mΩ (6 to 8Vdc, thermal current 1A, voltage drop method)							
	Low current load		Max. 100mΩ (6 to 8Vdc, thermal current 0.1A, voltage drop method)								
	Connector	Max. 40mΩ (excluding fixed resistance such as cable)									
	Contact voltage/min.current	24V 10mA, 12V 20mA (standard load), 5V 10mA (low current load)									
	Electrical performance (2) EN60947-5-1 GB140 48.5-2001	Rated operating voltage	240Vac, 30Vdc								
Rated thermal current (Ith)		Silver contacts: 10A. Gold-plated contacts: 1A.									
Rated frequency		45 to 65Hz and DC									
Short-circuit protection		TÜV F10A fuse (IEC 60127) / CQC instant blowing fuses: silver contacts 15A, gold contacts 3A									
Rated insulating voltage (Ui)		250Vac									
Rated conditional short-circuit current		1,000A									
Switching overvoltage		Category III (IEC 60204-1)									
Rated impulse dielectric strength (Uimp)		Between each terminal and ground, and between terminals: 2,500V.									
Mechanical performance	Actuator strength	Withstands load 5 times O.F. for 1 minute (in operating direction)									
	Terminal strength	Withstands tightening torque of 1.5N·m for 1 minute									
	Impact resistance	Model	High sensitivity roller lever type	200m/s ² in free and total travel positions							
			Light operation roller lever & non-directional roller lever types	200m/s ² in total travel position							
			Non-directional operation type	300m/s ² in total travel position							
			Models other than the above	300m/s ² in free and total travel positions							
			Contact opening for 1ms max. in free and total travel positions								
	Vibration resistance	Model	1.5mm peak-to-peak amplitude, frequency 10 to 55Hz, for 2 continuous hours								
			High sensitivity roller lever type & non-directional type	In total travel position							
			Models other than the above	In free and total travel positions							
Contact opening for 1ms max. in free and total travel positions											
Allowable operating speed	Model	Other than on the right	1LS19-J	2LS1-J	2LS-J6	3LS1-J	5LS1-J/5LS7-J	8LS3-J	8LS125-J	8LS152-J	
		Max.	0.5m/s	0.5m/s	0.5m/s	0.2m/s	0.3m/s	0.5m/s	0.5m/s	0.3m/s	0.3m/s
Min.	1.7mm/s	0.4mm/s	1.0mm/s	1.0mm/s	0.5mm/s	0.2mm/s	10mm/s	50mm/s	20mm/s		
Operating frequency	At max. speed, actuator is not damaged. At min. speed, contact instability lasts 0.1s max. Light operation roller lever/ heat-resistant/ cold-resistant: max. 60 operations/minute, Models other than the above: max. 120 operations/minute										
Cable pullout strength	Min. 100N										
Life	Mechanical life	Model	Other than on the right			1LS-J50, 2LS-J6, cold-resistant type		3LS1-J		6LS□J, heat-resistant type	
		Life	Min. 10 million operations			Min. 1 million operations		Min. 5 million operations		Min. 2 million operations	
	(At 1/3 to 2/3 of the rated overtravel.)										
	Electrical life	Model	Standard load built-in switch			Standard load double seal built-in switch			Low current load built-in switch		
Life		Min. 500,000 operations at rated load			Min. 200,000 operations at rated load			Min. 2 million operations at rated load			
Operating frequency: Above conditions must be satisfied at 20 operations/minute.											
Ambient operating conditions	Temperature	Standard model (standard load and low current load) : -10 to +70°C (freezing not allowed)									
		Double seal type : 1LS19-JS: 0 to +70°C (freezing not allowed)									
		: 2LS, 3LS, 5LS, 8LS125-JS: +5 to +70°C (freezing not allowed)									
		Double seal type other than above: -5 to +70°C (freezing not allowed)									
		Heat-resistant type : -10 to +120°C (freezing not allowed)									
Cold-resistant type : -40 to +70°C (freezing not allowed)											
Humidity	Max. 98% RH*3										
Recommended tightening torque	Body	5 to 6N·m (M5 hexagon socket head bolt)									
	Lever	4 to 5.2N·m (M5 hexagon socket head bolt)									
	Terminal	1.0 to 1.4N·m (M4 binding head machine screw)									
	Cover	1.3 to 1.7N·m (M4 small round head screw)									
	Head	0.8 to 1.2N·m (M3.5 small round head screw)									
	Cap nut	2 to 3N·m (M22 screw for 3LS)									
	Piano wire lever	0.6 to 0.8N·m (M3 hexagon head set screw)									
Connector tightening torque	0.4 to 0.6N·m (M12 ring)										

Notes: Mechanical performance values for the roller lever type are for lever length of 38.1mm.

*1. Some models do not fall under this category. *2. EN 60947-5-1 and GB 14048.5-2001 applies only to G-type products with a ground terminal. *3. Max. 95% RH for connector and preloaded connector types

●Resin filled type

Resin filling

- Double-seal type has a sealed internal switch
- Places where coolant might seep, like the body cover and conduit, are filled with epoxy resin.
- Resin filling plus an ultra long life limit switch, for enhanced reliability.

N.O. wiring

N.C. wiring * Note

4-lead type: catalog listing LS-PA5□4

Connector		Internal switch
Contact No.	Lead color	Terminal No.
1	—	—
2	—	—
3	Black	NO.3
4	White	NO.4

Connector		Internal switch
Contact No.	Lead color	Terminal No.
1	Red	NO.1 (N.C.)
2	Green	NO.2 (N.C.)
3	Black	NO.3 (N.O.)
4	White	NO.4 (N.O.)

*Even in an N.C. wiring connection, N.C. contact assignments are Nos. 3 and 4.

●Preleaded connector for LS Series

Models (e.g. 2LS□-J□, 8LS□-J) for which a complete model No. is not given can be modified into the preleaded connector type by attaching the separate parts indicated below to a standard LS Series body.

Catalog listing	Name	Appearance	Power supply	Cable length	Number of leads
PA5-4IBX03HK4-E	PA5 Series connector cable		DC	30cm	4
PA5-4JBX03HK4-E			AC		
PA1-A10PF	Sealed connector		—	—	—

Assembly method

Wiring method

●PA5 connectors for connector-type limit switches

Appearance	Power supply	Cable features	Cable length	Catalog listing	Lead color
	DC	Oil-resistant, flexible UL2464 flame-resistant, EN-compliant	2m	PA5-4ISX2MK-E	1: brown, 2: white, 3: blue, 4: black
			5m	PA5-4ISX5MK-E	1: brown, 2: white, 3: blue, 4: black
	AC		2m	PA5-4JSX2MK-E	1: brown, 2: white, 3: blue, 4: black
			5m	PA5-4JSX5MK-E	1: brown, 2: white, 3: blue, 4: black

●Contact pin layout and lead color

Pre-leaded connector type

Connector cable	Connector appearance		Pin layout			
			Without indicator lamp	With LED indicator lamp	With neon indicator lamp	Lead colors
AC cable: -PA -PA03	Switch side (male)	Connector side (female)				1: brown (N.C.) 2: white (N.C.) 3: blue (N.O.) 4: black (N.O.)
DC cable: -PD -PD03	Switch side (male)	Connector side (female)				

Note: The shape of the connector plugs and sockets is different for AC and DC cables, which are not mutually compatible.

The contact assignments of limit switches comply with Nippon Electric Control Equipment Industries Association standards (NECA 4202).

●Connector section specifications^{*1}

Item	Details	
Operating voltage/ current range	For AC type	Min. 5V 5mA. Max. 250Vac 3A.
	For DC type	Min. 5V 5mA. Max. 125Vdc 3A.
Insulation resistance	Min. 100MΩ (by 500Vdc megger)	
Dielectric strength	1,500Vac for 1 minute (between contacts, and between contacts and connector housing)	
Initial contact resistance	Max. 40mΩ (when 3A current is supplied to connected male and female connectors. Semiconductor lead-specific resistance not included)	
Mating/unmating force	0.4 to 4.0N per contact	
Mating cycles	50	
Connector nut tightening torque	Max. 0.8N·m ²	
Cable pullout strength	Min. 100N	
Vibration resistance	10 to 55Hz, 1.5mm peak-to-peak amplitude, 2 hours each in X, Y and Z directions	
Impact resistance	300m/s ² , 3 times each in X, Y and Z directions	
Protective structure	IP67 (IEC 529)	
Operating temperature	-10 to +70°C (freezing not allowed)	
Storage temperature	-20 to +80°C	
Operating humidity	Max. 95% RH	
Material	Contact	Gold-plated brass
	Contact holder	Glass-lined polyester resin
	Housing	Polyester elastomer
	Coupling	Brass (For DC, Ni-plated. For AC, orange coating)
O-ring	NBR (nitrile rubber)	
Recommended tightening torque	0.4 to 0.6N·m	
Connector cable	Catalog listing for DC	PA5-4ISX□MK-E ^{*3}
	Catalog listing for AC	PA5-4JSX□MK-E ^{*3}
	Nominal cross-sectional area, No. of leads	
	0.5mm ² , 4 leads	

*1. Specifications assume the use of a Yamatake connector (PA5 Series), and apply to 2-circuit double break switches (general-purpose and ultra long-life types).

*2. Tighten firmly by hand. If the connector is not tightened firmly, IP67 protection may be lost, or the connector may come loose.

*3. The number corresponding to □ in the catalog listing indicates the cable length (2 = 2m, 3 = 3m, and 5 = 5m).

●Connector dimensions

INDICATOR LAMP

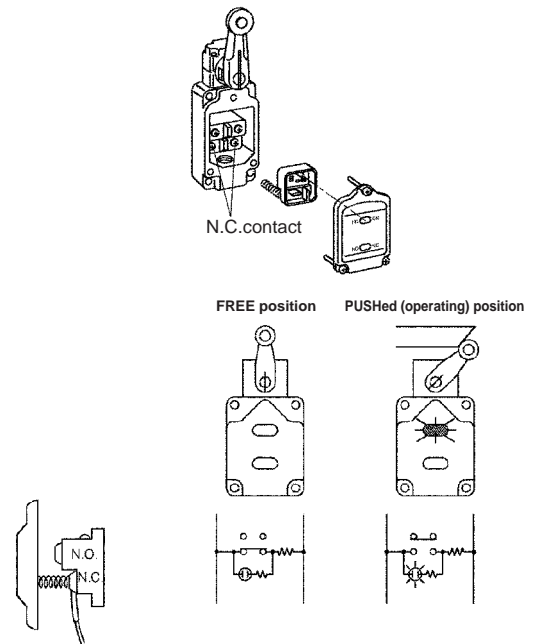

Option	Without indicator lamp	With 100/200Vac neon lamp	With 12 to 125V LED lamp for AC or DC
Catalog listing	□LS□-J	□LS□-JE	□LS□-JEC
Lamp cover front side	—		
Circuit diagrams			
Notes	—	Notes To ensure lighting of the neon lamp, use 75Vac min.	Notes The voltage indicator lamp (red LED) is 12 to 125V. The indicator lamp operates on either AC or DC power.
Lamp cover catalog listing (replacement part)		LS-29PA1	LS-29PAEC
Specifications	Operating voltage	100 to 200Vac	12 to 125V, AC or DC
		100Vac	200Vac
	Thermal current	Approx. 0.5mA	Approx. 1.5mA
	Resistance	100kΩ	33kΩ

● Connection/operation of lamp cover

When set to light in FREE position

When set to light in PUSHed (operating) position (PUSH)

Series connection

Up to six switches can be connected in series when the power is 100V. Programmable controllers can also be connected in series. The brightness of the LED lamp is fixed regardless of the power, as light is generated by a built-in fixed current diode. (Note that neon lamp type "E" Series switches cannot be connected in series at 100V.)

PC connection possible

The leakage current when the limit switch is not operating is 0.6mA maximum. The PC will not malfunction due to dim lighting of the LED. Moreover, a fixed-current diode is built in to ensure fixed LED brightness regardless of the voltage.

WHEN USING LS SERIES LIMIT SWITCHES

1. Changing the position of the operating head

The operating head can be set to four positions. To set to the desired position, remove the four head tightening screws and rotate the head 90° to one of the four different positions. When changing the direction of the operating head, change the direction of the internal plunger at the same time. The roller plunger can be set to one of two different positions 90° apart.

2. Changing the operating direction of roller lever type

The operation direction can be set to three sequences (excluding 1LS-J500, 1LS-J550 and 1LS-J50). Lever type limit switches can be set to operate electrically when moved either clockwise or counterclockwise by changing the direction of the internal stepped plunger.

3. Indicating the operation set position on the roller lever type

Excessive or insufficient pushing of the lever can be eliminated to ensure stable prolonged use by setting so that the pointer that rotates with the lever enters the head's protrusion zone. The position of the protrusion zone varies with different model types, such as standard, high sensitivity, and 90° T.T. types.

3.1 Standard type (1LS1-J□, 1LS-J50□Series)

3.2 High-sensitivity type (1LS19-J□, 1LS-J55□Series)

4. Indicating the operation set position of roller plunger type (5LS1-J□)

The indentation on the roller plunger is for preventing excessive or insufficient plunger operation. Determine the position of the actuating element so that the indentation on the plunger fits into the top surface of the bushing.

5. How to set the actuating element

5.1 Roller lever type

Symbol	Operating angle (°)				
Model	P.T.	O.T.1	O.T.2	R.T.	M.D.
1LS1-J□	20	30	—	5	12
1LS19-J□	5 ⁺² ₀	30	—	1.5	3
1LS-J500□	20	—	55	5	12
1LS-J550□	10 ⁺² ₋₁	—	62	5	5

Symbol	Operating force (N)			動作距離 (mm)			
	O.F.	R.F.	T.T.F.	A	B	C	D
1LS1-J□	13.4	2.2	17.9	13.0	16.1	2.3	11.3
1LS19-J□	13.4	2.2	17.9	3.3	18.5	0.1	6.7
1LS-J500□	8.9	0.98	—	13.0	23.8	2.3	25.9
1LS-J550□	8.9	0.98	—	6.6	29.6	0.6	25.7

Key to the abbreviations used in the above tables:

- P.T. : Pretravel
- O.T. 1 : Overtravel (standard switch)
- O.T. 2 : Overtravel (high overtravel switch)
- R.T. : Return operation
- M.D. : Movement differential
- O.F. : Operating force
- R.F. : Release force
- T.T.F. : Total travel force

5.2 Height from switch mounting hole to actuating element

Roller lever type

For roller lever type switches, we recommend setting the distance from the switch mounting hole to the actuating element as shown below.

Example: 1LS1-J (unit: mm)

Roller plunger type

For roller plunger type switches, we recommend setting the distance from the switch mounting hole to the actuating element as shown below.

Example: 5LS1-J (unit: mm)

6. Handling the connector and prelead connector

6.1 Tightening the fixing cap ring and outside screw lock ring

If the screw of the mating part is made of resin, the threads can easily be damaged when the connector is first tightened. When assembling the connector, align the center of the cores, push in as far as possible, and then turn to tighten.

Be sure to tighten fully by hand. The recommended tightening torque is 0.4 to 0.6N·m. Use of a tightening tool may damage the connector. If the connector is not tightened firmly, IP67 protection may be lost, or the connector may come loose.

6.2 Inserting and removing connectors

Before inserting or removing connectors, be sure to turn the power OFF. When removing, hold the connector itself--do not pull by the cable.

6.3 Cautions when bending cables

The minimum bend radius (R) of the cable is 80mm. Allow sufficient cable for bends.

6.4 Installation of connector type switches

(unit: mm)

6.5 Cautions when replacing connectors

When removing connectors to replace the switch or cable, wipe the connector and the surrounding area thoroughly to remove any water. After removing the connector, do not allow it to be immersed in chemicals or powder, or to be dropped. If the connector is immersed in a fluid, allow it to fully dry before connecting again. If the connector is dropped in powder, wipe it off completely before connecting again. Failure to observe these precautions may result in a short circuit or a failed connection.

7. Other

7.1 Protective structure

- IP67 protection does not assure complete waterproofing. Switch should not be in constant contact with water.
- Avoid use where external force is applied at all times on the connecting section of the connector.
- Do not use the body as a step or place heavy objects on top of it.

7.2 Ensuring a good seal

- When general-purpose limit switches are used in locations subject to splashing by water, oil, dirt and dust, or chips, water or oil sometimes enters the switch from the conduit due to capillary action. For this reason, be sure to use a sealed connector compatible with the cable.
- When the screws in the head or covers are loosened to change the operating direction of the switch, or the relationship between switch operation and the indicator lamp (lamp ON during switch standby / during switch operation), tighten the screws to the recommended tightening torque to ensure a good seal.

Recommended tightening torque

Cover: 1.3 to 1.7N·m (M4 screw)

Head: 0.8 to 1.2N·m (M3.5 screw)

7.3 Attaching switches

- Tighten each of the parts on the limit switch according to the appropriate tightening torques listed in the performance tables. Overtightening damages screws and other parts. On the other hand, insufficient tightening of screws lowers the effectiveness of the seal and reduces various performance characteristics.
- Do not leave or use covers and conduit parts open. Water, dirt, or dust may enter, which causing malfunction.
- Prevent impact to the lever body and head. Failure to do so might deform the actuator or cause defective switch return.
- Do not use silicone rubber electrical lead insulation, silicone adhesive or grease containing silicone. Doing so might result in defective electrical conductivity.

7.4 Wiring

- Do not perform wiring with the power ON. Doing so might cause electric shock, or the machine may start unexpectedly, causing an accident.
- Use crimp-type terminal lugs with covered insulation for electrical leads to prevent contact with covers and housings. If a crimp-type terminal lug contacts a cover, the cover may no longer shut or a ground fault may occur.
- Use sealed connectors (PA1 Series, etc. sold separately) or flexible tubing (PA3 Series) with IP67 or equivalent seal for conduits.
- Firmly tighten covers and conduits. If covers and conduits are not sufficiently tightened, the seal will be impaired and switch performance will no longer be assured.

7.5 Adjusting switches

- Do not apply excessive force (5 times O.F.) to the actuator beyond the total travel position. Doing so might damage the switch.
- Keep overtravel between 1/3 to 2/3 of the rated value. Small overtravel might cause the contacts to rattle due to vibration and impact, or may result in defective contact.
