

VP INSTRUMENTS

VPInstruments provides high quality, easy-to-use solutions, that give insight in your compressed air system.

Compressed air flow meters, air flow monitoring systems, measurement software and more!

VPInstruments offer everything you need, from easy to use compressed air flow meters up to turn key monitoring systems for plant wide measurement of compressed air consumption.

Our flow meters and monitoring systems are used worldwide for air audits, leakage monitoring, performance testing and maintenance management. Lord Kelvin said: "If you cannot measure it, you cannot improve it". And professional compressed air flow measurements start with equipment from VPInstruments!

Compressed air is a very expensive energy source. In fact, it can be about 20 times more expensive than electricity.

In many cases, compressed air is wasted due to leakage, non-optimal compressor configurations or misuse. System improvements can result in savings from 20-50%.

"After installation of five VPFlowScope compressed air flow meters we discovered 30% of leakage. We repaired the biggest leaks. Our savings are more than 85,000 Euro per year!"

Gases

Our products and software can be used for compressed air, Nitrogen and inert gasses.

Benefits:

- Easy to use
- Versatile use
- Plug&Play accessories
- Easy to use software

See our website for more information. Download the free *VPCalculator*, the product advisor, to select your flow meter.

Product overview

Flow meters

Insertion probes

With our *VPFlowMate* and *VPFlowScope* measuring flow becomes an easy task. Our instruments are perfect for compressed air flow metering and mobile air audits. With the *VPFlowScope* you can measure flow, pressure and temperature simultaneously!

In-line flow meters

The *VPFlowMate* in-line is the professional tool for compressed air flow metering. For tube sizes up to 2 inch. Measurement range is up to 750 m³_n/hr.

Monitoring systems

Monitoring systems

With our *VPVision* or *AirVision* monitoring systems you will have the perfect system for keeping a permanent eye on your compressed air system. In one overview you can see your compressed air usage and allocation.

Accessories

Displays

The *VPFlowTerminal* is a plug & play wall mount display with built in power supply. With optional data logger.

Software

VPIstruments offers easy to use software for configuration, data logging and real-time flow measurements.
