Production Discontinuance of Measurement Device Components

Thank you for your usual patronage.

Due to the deteriorating economic situation worldwide since last year, the business of the entire Fuji Electric Group has significantly decreased. Accordingly, we are taking the countermeasures.

In our measurement component business, we have selected models on which to focus, and have reorganized our production sites, aiming to strengthen business performance. As a result, we have decided to discontinue the models listed below. These include old models for which parts are difficult to obtain, models whose supply system has a high maintenance burden, and models with decreasing sales volume. To prevent inconvenience to customers, we will suggest replacement models, accept final orders for spares, and provide other possible support to fulfill our responsibilities as a component supplier.

We thank you for your long patronage, and ask for your understanding and cooperation. Rest assured that we will continue to supply high-quality products.

Notes

1 Discontinued models

Vortex flowmeters, weir flowmeters, electromagnetic flowmeters, temperature transmitters, temperature sensors, float type level transmitters, height transmitters, pick-ups, compact pressure sensors, condensate chambers, stop valves, process converters, alarming indicators, integrators, process controllers, customized controllers, cylinder type damper drivers, electric actuators, FFI transmitters, fieldbus transmitters

2 Final order date and final production date

Final order date is May 31, 2009. Final production period is from June 30 to July 31, or immediately. If you request a delivery date after August 1, we may ask you to move it up to before July 31.
