- The AS 8 dosing version is especially designed for employment in dosing lines. It allows one volume counter to be connected.
- 6 dosages (programmes) can be stored in the AS 8. Specific dosages are called up via the three keys on the front panel. The input values are arranged in menus.
- The filling process is started by the digital input. The AS 8 resets the last dosage quantity and switches the dosage valve. The volume counter measures the flow and delivers square wave signals to the AS 8.
- The AS 8 sums the input signals. When the quantity is reached the dosage valve will be switched.
- The second relay contact enables the indication of faulty dosages.
- The settings are made by using the three keys on the front panel. The input values are arranged in menus.
- The integrated 24 VDC sensor supply enables direct connection to the volume counter.
