David BLAVETTE

For potable water distribution, Vinci is looking for flowmeter DN350 with Pipe in cast 2GS

Flow 150 l/s, pressure 10 bars. They in fact need non-intrusive system and portable. They also would like to record data at site.

I decline after offering Magflux

Discuss with Ms Valero. SARP Industries uses fluids aggressive and dirty. They use in general for flow measurement: Mass flowmeter or Electromagnetic flowmeter or Vortex. From E&H or Foxboro. They bought few Pitot tubes for flue gas application from System C distributor.

They do not use mechanical flowmeters as it is considered as old fashion style.
